Hawaii Department of Public Safety

The Hawaii Department of Public Safety (PSD) is responsible for carrying out judgments of the state courts whenever a period of confinement is ordered. Its mission is to uphold justice and public safety by providing correctional and law enforcement services to Hawaii’s communities with professionalism, integrity and fairness. Currently, offenders are housed within State of Hawaii jail and prison facilities located within Hawaii, at the Federal Detention Center in Honolulu, and in private contractor facilities on the mainland.

PSD operates Community Correctional Centers (CCCs), widely known as jails, on the islands of Kauai, Maui, Hawaii and Oahu. Each CCC houses short-term sentenced (felons, probation, and misdemeanor), pretrial (felon and misdemeanor), other jurisdiction, and probation/parole violators. CCCs provide the customary county jail function of managing both pre-trial detainees and locally-sentenced misdemeanant offenders and others with a sentence of one year or less. CCCs also provide an important pre-release preparation/transition function for prison system inmates who are transferred back to their county of origin when they reach less than a year until their scheduled release. Although some offenders will remain in prison for life, the majority (over 95 percent) will serve their sentences and be released, eventually returning to the community.

PSD is committed to providing a safe, secure, healthy, humane, social, and physical environment for inmates and staff. However, aged and obsolete CCCs have limited PSD’s ability to provide such environments. All jail facilities are antiquated with limited space for inmate programs and treatment services and combined with declining physical plants, improving facilities and replacing facilities when necessary are important priorities. Chief among such priorities is the replacement of the existing Oahu CCC (OCCC) with a new facility at the Animal Quarantine Station in Aiea/Halawa. Assisting with OCCC planning and development is the Department of Accounting and General Services (DAGS) and a team of consultants (the “OCCC Team”).

Additional Studies Underway at Animal Quarantine Station

The State of Hawaii is moving ahead with plans to develop a much-needed replacement for the Oahu Community Correctional Center (OCCC) on the site of the Animal Quarantine Station (AQS) in Aiea/Halawa.

Subsurface Investigations Conducted

A comprehensive and thorough understanding of subsurface conditions within the AQS property is an essential part of the planning process and plays an important role in the determining optimum locations for OCCC structures, whether conditions exist that will require special engineering designs, and in estimating the cost of site preparation and foundation construction. To address those topics, a preliminary geotechnical program of the AQS property (east of H-3) is underway involving soil borings, soil sampling and laboratory testing, subsurface analysis, and groundwater measurements. Common to such investigations is the need to determine on-site features and

Soil borings at Animal Quarantine Station (Geolabs, August 2020).
building foundation systems as well as to identify any unfavorable surface and subsurface conditions that may limit development or require additional stabilization or foundation and footing design methods or soil remediation prior to construction.

Subsurface conditions were explored by drilling and sampling nine borings extending to depths between five and 103 feet below the ground surface. The borings generally encountered a surface fill layer approximately two to 13 feet thick underlain by older alluvial deposits with basalt rock formation encountered in one of the borings at about 85.5 feet depth extending to the maximum depth explored of 103 feet below the ground surface. Groundwater was not encountered in the borings at the time of the field exploration. The results of the investigation will provide the OCCP Team with the information necessary to finalize the siting of the buildings, develop footing and foundation strategies, and help refine the construction cost estimates.

**Building Surveys Underway**

The AQS property contains two Department of Agriculture administrative buildings, cat holding areas, over 1,600 dog kennels, a large animal holding facility, a maintenance shop, two duplex houses, a cottage, and a water shed. To develop the new OCCP, all these structures will require demolition. Prior to demolitions, a survey is being performed consisting of a visual examination of the buildings and structures planned for removal. The survey involves the collection of building material samples and laboratory analysis to determine whether any hazardous materials exist and if so to what extent and their locations.

At the conclusion of the sampling and laboratory testing a survey report will be prepared to present the findings. The report will be used by the OCCP Team to evaluate any concerns during the demolition phase and need for special handling or construction worker safety measures.
What is the difference between a Prison and a Jail?

Many people use the terms “jail” and “prison” interchangeably; however, in purpose and operation, the two types of facilities are substantially different. On a basic level, a jail is a facility where individuals (jail inmates) are held pending adjudication. These may be persons who either could not meet their bail or may not have qualified for bail according to the courts. In certain cases, a jail may also house individuals who have been to court, convicted, and sentenced to short-term incarceration — usually less than a year. On the other hand, a prison is exclusively populated by individuals (prison inmates) who have been convicted of a serious crime and are serving a long-term sentence — typically a year or more.

The differences between a jail and a prison may not be obvious to the casual observer. While jails and prisons must both meet inmates’ basic needs, both are required to provide access to many of the same programs and services. Because the length of time jail inmates are incarcerated is often measured in days and not years, the focus of jail programs and services is on stabilization versus a prison’s focus on long-term rehabilitation. In addition, a jail operates on a ‘decentralized’ services model whereby programs and services are delivered to jail inmates in their housing areas.
A challenge for the operation of a jail is the unknown disorders and illnesses that new inmates may come in with. For example, many jail inmates who first arrive at the facility may be in crisis due to an undiagnosed or untreated substance use disorder and/or mental health illness. In these circumstances, the burden is on the jail to provide a proper diagnosis and appropriate intervention. In addition, the jail population is under the legal jurisdiction of the Judiciary (courts) and not PSD. Jail inmates can only be released, placed in outside programs, or assigned to other alternatives to incarceration with the approval of the courts.

In contrast, a prison facility houses inmates that have been convicted and sentenced. Upon their arrival at the facility, prison inmates are assessed and evaluated and then assigned to appropriate housing based upon identified risk and need. By this time, prison inmates with a substance use disorder and/or mental illness who are coming from a jail have been diagnosed and begun treatment. Because of the longer-term sentences in a prison, the operation of the facility will have a focus on rehabilitation. Programs offered may include training in a trade and education programs for helping prison inmates to acquire their GED or secondary degrees. There may also be programs that utilize prison inmates’ skills and labor. Accordingly, many prisons will operate on a ‘centralized’ services model where prison inmates will be allowed to move throughout the facility to areas such as dining, health clinic, recreation, prison industries or classrooms.

The matrix below summarizes many of the key features of jails and prisons and revealing the substantial design and operating differences between the two types of facilities.

<table>
<thead>
<tr>
<th>Feature</th>
<th>Jail</th>
<th>Prison</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inmate populations</td>
<td>Individuals (jail inmates) held pending adjudication. Includes those not able to meet their bail or have not qualified for bail. May also house individuals who have been to court, convicted, and sentenced to short-term incarceration – usually less than a year. In Hawaii known as a Community Correctional Center.</td>
<td>Populated by individuals (prison inmates) who have been convicted of a serious crime and are serving a long-term sentence – typically a year or more. Also known as a correctional facility.</td>
</tr>
<tr>
<td>Length of Stay</td>
<td>Stays are typically measured in days or weeks. Individuals sentenced to a term of a year or less can serve in jail.</td>
<td>Stays are measured in years.</td>
</tr>
<tr>
<td>Programs and Services</td>
<td>Focus is on stabilization including diagnosis and appropriate treatment for medical and/or mental health illness.</td>
<td>Focus is on long-term rehabilitation. Programs offered may include training in a trade and education programs for acquiring GED or secondary degrees.</td>
</tr>
<tr>
<td>Operating Model</td>
<td>‘Decentralized’ services model whereby programs, services, meals and treatments are delivered to jail inmates in their housing areas.</td>
<td>‘Centralized’ services model where prison inmates are allowed to move throughout the facility to areas such as dining, health clinic, recreation, prison industries or classrooms under escort.</td>
</tr>
<tr>
<td>Legal Jurisdiction</td>
<td>Courts have jurisdiction; inmates can only be released, placed in outside programs, or assigned to other alternatives to incarceration with approval of the courts</td>
<td>Department of Public Safety has jurisdiction.</td>
</tr>
<tr>
<td>Design Features</td>
<td>Depending on location, number of beds, etc., facilities are typically compact in design (one structure) rising 3-5 stories (mid-rise) or 6-10+ stories (high-rise).</td>
<td>Depending on location, number of beds, etc., facilities are typically 1-2 stories (low-rise). Multiple structures in a campus-like arrangement with housing, administrative buildings, classrooms, dining, medical and other units.</td>
</tr>
<tr>
<td>Security Features</td>
<td>Highly secure structures with security features incorporated within building design and operation. Typically, avoids perimeter fencing, vehicle patrol road, high-security lighting, similar measures.</td>
<td>Typically highly secure structures incorporating rows of perimeter fencing, vehicle patrol roads, CCTV cameras, high-security lighting, guard towers, and other measures.</td>
</tr>

Current Project Activities

Public Transportation
Public transportation is important to the new OCCC for visitors, staff, and others accessing the site. The selected Halawa site is located in proximity to existing bus service and a nearby future Honolulu Area Rapid Transit (HART) rail station. The OCCC team has initiated discussions with the Honolulu County Department of Transportation to explore the expansion of bus service into Halawa Valley Street. Discussions and investigations will continue to explore ways to provide regular pickup and drop-off at or near the new OCCC. These may include, but are not limited to, new or relocated bus stops, new routes and schedules, and/or adjustments to existing bus routes and schedules. Extending bus service onto Halawa Valley Street would potentially benefit OCCC staff, visitors and surrounding businesses. Development of a new OCCC on the site could provide the impetus for expanded service to the area, as well as enhanced ridership of HART.

Traffic and Congestion
Providing safe and convenient motor vehicle access to and from the new OCCC will be essential as employees and visitors travel to/from the OCCC, as well as service vehicles, deliveries, etc. In addition, PSD staff will transport inmates to court appointments and medical treatments during the week. Expanded use of video conferencing for court-related matters and inmate visitations also may impact and reduce traffic to and from the facility. Pre-release inmates commuting daily to their places of employment are expected to continue being housed at the Laumaka Facility in Kalihi. Staff shifts are slightly different than most workers’ start-and-finish times. This alleviates adding to the congestion during rush-hour traffic. The OCCC team will be studying the traffic conditions, the projected impacts will be updated with current data, and needed improvements to site ingress and egress will be planned.

During the public engagement process, the Aiea community expressed its desire for improvements to the current access road (Halawa Valley Street). An additional review of the current and projected traffic conditions will provide recommendations for traffic management and mitigation, and other transportation infrastructure improvements may be considered during the Community Partnering process. The various new development projects in the area, such as the stadium and OCCC, provide opportunities to address locations that already suffer from traffic congestion.

Transportation for Released Inmates
In addition to efforts to increase and improve public transportation directly to the site, future Traffic Management studies will include investigation of the need for providing dedicated shuttle programs and/or transit services.

Community Safety
One of the community’s primary concerns is the safety of its residents. The OCCC Team will continue to address safety concerns throughout the planning process. PSD has established policies and procedures for responding to escapes, including notification to PSD’s Sheriffs Division and HPD. Businesses are notified through the Nixile Alert System. A thorough review of the methods used for the transportation of inmates once they are released will continue to be included when analyzing needs for public transportation, as well as shuttle programs. A modern facility with contemporary safety designs benefits the community, the corrections staff, visitors and inmates.

OCCC Financing and Delivery Options
The OCCC project team is evaluating the suitability of various project financing and delivery options including the traditional Design-Bid-Build option, the Design-Build option, and a Public Private Partnership (P3) option. The project team is performing a series of evaluations of financing and delivery options that involve estimating the capital and maintenance costs for the new facility, assessing public and private finance options, performing a risk assessment that include identifying the major project risks, their likelihood of occurring and preparing risk mitigation strategies, conducting market sounding, and reaching out to local construction industry representatives. These activities will serve to guide the State as to the best options for delivering and financing the OCCC project. Regardless of the method for financing and delivering the new OCCC, the facility will continue to be operated and managed by PSD staff.

Community Partnering
Community outreach, including participation at neighborhood boards and community association meetings, publication of newsletters, and responses to community questions, is continuing throughout the planning process. The Community Partnering process is mandated to be implemented once the Request for Proposal (RFP) is issued. Nonetheless, the OCCC Team is preparing to engage Aiea/Halawa residents to identify community leaders and others to serve as representatives. Together with PSD, community representatives will identify potential impacts and facilitate discussions about the need for community benefits and enhancement measures.
Upcoming Activities

The following activities are anticipated in the months ahead.
